Questions

Questions

- ★ Why do we care?

Questions

- ★ Why do we care?
  $\hookrightarrow$ Probability of connectedness! (e.g. friends making plans)

Questions

- ★ Why do we care?
  $\hookrightarrow$ Probability of connectedness! (e.g. friends making plans)
- How many components can a graph have?

Questions

- ★ Why do we care?
  $\hookrightarrow$ Probability of connectedness! (e.g. friends making plans)
- How many components can a graph have?
  $\hookrightarrow$ Related to the size! Also perfect matchings

Questions

- ★ Why do we care?
  $\hookrightarrow$ Probability of connectedness! (e.g. friends making plans)
- How many components can a graph have?
  $\hookrightarrow$ Related to the size! Also perfect matchings
- What is the probability that k components are produced?

Questions

- ★ Why do we care?
  $\hookrightarrow$ Probability of connectedness! (e.g. friends making plans)
- How many components can a graph have?
  $\hookrightarrow$ Related to the size! Also perfect matchings
- What is the probability that k components are produced?
  $\hookrightarrow$ Depends on the graph (and some are easier than others)

Questions

- ★ Why do we care?
  $\hookrightarrow$ Probability of connectedness! (e.g. friends making plans)
- How many components can a graph have?
  $\hookrightarrow$ Related to the size! Also perfect matchings
- What is the probability that k components are produced?
  $\hookrightarrow$ Depends on the graph (and some are easier than others)
- Can the permutation indicate the component number?

Questions

- ★ Why do we care?
  $\hookrightarrow$ Probability of connectedness! (e.g. friends making plans)
- How many components can a graph have?
  $\hookrightarrow$ Related to the size! Also perfect matchings
- What is the probability that k components are produced?
  $\hookrightarrow$ Depends on the graph (and some are easier than others)
- Can the permutation indicate the component number?
  $\hookrightarrow$ Maybe! Tune back in next April!

Questions

- ★ Why do we care?
  $\hookrightarrow$ Probability of connectedness! (e.g. friends making plans)
- How many components can a graph have?
  $\hookrightarrow$ Related to the size! Also perfect matchings
- What is the probability that k components are produced?
  $\hookrightarrow$ Depends on the graph (and some are easier than others)
- Can the permutation indicate the component number?
  $\hookrightarrow$ Maybe! Tune back in next April!
- What types of relationships exist between different types of graphs?

Questions

- ★ Why do we care?
  $\hookrightarrow$ Probability of connectedness! (e.g. friends making plans)
- How many components can a graph have?
  $\hookrightarrow$ Related to the size! Also perfect matchings
- What is the probability that k components are produced?
  $\hookrightarrow$ Depends on the graph (and some are easier than others)
- Can the permutation indicate the component number?
  $\hookrightarrow$ Maybe! Tune back in next April!
- What types of relationships exist between different types of graphs?
  $\hookrightarrow$ Paths & cycles are related, but what else?
